DETAILED ACTION

1. It would be of great assistance to the Office if all incoming papers pertaining to a filed application carried the following items:

1. Application number (checked for accuracy, including series code and serial no.).
2. Group art unit number (copied from most recent Office communication).
3. Filing date.
4. Name of the examiner who prepared the most recent Office action.
5. Title of invention.
6. Confirmation number (See MPEP § 503).

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

3. The information disclosure statement (IDS) submitted on 2/2/02 has been considered by the examiner.

Drawings

4. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the **“sampling circuit”** of claim 7 and **“a buffer store”** for buffer storing the sampled of claim 10 must be shown or the feature(s) canceled from the claim(s). (See fig.5) No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate

prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

5. Claims 1 and 3 are objected to because of the following informalities: in claim 1, "the chip clock rate" should be ---a chip clock rate---; claim 1, line 6, "the signal components' should be ---signal components--- and in claim 3, "the memory device" should be ---a memory device--- or should depend from claim 2. Appropriate correction is required.

Specification

6. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

Allowable Subject Matter

7. This application is in condition for allowance except for the following formal matters:

See paragraph 4-6 above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

8. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fail to anticipate or render obvious the claimed CDMA receiver comprising ***a weighting coefficient calculation device for calculating weighting coefficients for the various signal components of the CDMA signal as a function of the estimated channel coefficients and stored spreading and scrambling codes*** in combinations with a receiving device; a rake receiving circuit; a channel estimation circuit for estimating channel coefficients of a transmission channel by means of predetermined reference data sequence; a weighting circuit for weighting the signal components with the calculated weighting coefficients and a combiner for combining the weighted signal components to form an estimated received data signal in the manner and complexity explicitly claimed in claim 1.

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Abeta et al (6,757,272) is cited to show a CDMA receiver comprising channel estimation unit.
